

Apart from the pine and oak forest, medicinal plants are also abundant. The best quality wood in Serbia is located right on Kukavica, the golden beech.

Aside from the golden beech, wild raspberries, blackberries, mushrooms, medicinal and herbs, and sweet potatoes grow here.

# Kukavica mountain

There is a hiking association "Kukavica" that organizes hiking tours. Our biology teacher Snežana Mitić was a lecturer and guide during the "Herbs and Mushroom Days" event. We learned about wild sustainable food, biodiversity of the mountain, ecological gardening and preparing different dishes.

Among the animals there are wild boar, fox, roe deer, wolf, large game pheasant, wild pigeon, rabbit, squirrel, badger and small game.

There are no factories or other polluters on this mountain
